SUMMARY

Full-Stack Software Engineer with 4+ years of professional experience building and scaling production systems in fintech, food and retail, and education. At Shuru Technologies I work on a global multi-asset trading platform; before that I built the data platform and backend services for Pickup Coffee (500+ stores), cutting API latency by 30% and database load by 40%. Alongside my full-time role, I design and deliver complete software products for schools and businesses, from mobile apps and web platforms to AI assistants.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Python, SQL, HTML5, CSS3
Backend	Node.js, Express.js, NestJS, Fastify, FastAPI, REST, Microservices, WebSockets, OAuth 2.0
Frontend & Mobile	React, Next.js, Redux, Tailwind CSS, React Native, Expo
Databases & Data	PostgreSQL, MySQL, MongoDB, Redis, BigQuery, Apache Airflow, Metabase, ETL pipelines
Cloud & DevOps	AWS (EC2, RDS, S3), Google Cloud (GCP), Docker, Kubernetes, CI/CD (GitHub Actions)
AI & ML	LLM agents, Text-to-SQL, RAG, Self-hosted LLMs (vLLM, Ollama), Gemini API, OpenCV
Payments	Razorpay, Cashfree, Maya, GCash, debit and credit card payments, payment gateway integration
Practices	System design, Performance tuning, Distributed tracing, Automated testing, Message queues

PROFESSIONAL EXPERIENCE

Shuru Technologies — Product Engineer, Backend (Software Engineer) **Jun 2024 – Present**
Software engineering company serving clients across Asia, the Middle East and Europe Gurugram, India (Remote)

Fintech client · Global multi-asset trading platform Oct 2026 – Present

- Develop backend features for a multi-asset trading platform, used by traders worldwide.

Pickup Coffee · Coffee chain with 500+ stores in the Philippines and Mexico Jun 2024 – Oct 2026

- Built the data platform from the ground up: Apache Airflow pipelines from Google Cloud Storage into BigQuery, with Metabase dashboards giving marketing a single source of truth for sales and customer data.
- Developed Node.js (Express) microservices on Kubernetes for the customer ordering app, in-store barista app and menu and pricing back office, covering orders, wallet, vouchers and promotions.
- Worked on payment integrations for the Philippines and Mexico, including Maya, GCash and debit/credit card payments.
- Reduced API latency by **30%** through query optimization and Redis caching.
- Cut database load by **40%** and slow queries by **60%** by indexing and tuning MySQL and PostgreSQL (Cloud SQL) queries.
- Introduced distributed tracing (OpenTelemetry, Jaeger) across 5+ services, roughly halving the time to diagnose production issues.
- Led the customer referral program from technical design to launch: campaign APIs, Talon.One integration and Redis-backed queues for rewards.

Independent — Software Engineering Consultant & Tech Advisor **2026 – Present**
Technology partner to schools, education institutes and businesses, alongside full-time role Remote

Yugam International School · CBSE school, Kanpur

- Built an AI assistant that answers plain-English questions over **1.7 million** school records using text-to-SQL on a privately hosted LLM, keeping data in-house and GPU costs low.
- Delivered AI lesson planning, face-recognition attendance and the school website with online payments; lead a small team building the CRM, HR and transport-tracking systems.

Shikhar Classes · JEE and NEET coaching institute

- Built and run the institute's complete digital platform: website, online exam system, admissions CRM, college admission predictors and an AI-graded aptitude test.
- Replaced paper forms with online registration and fee payments, and made the website rank for competitive-exam searches.

Neem Karoli Sales · Beverage wholesaler

- As sole engineer, delivered a B2B ordering platform with Android apps for retailers and delivery staff, online payments and automated GST invoicing, moving the business from phone and paper orders to digital ordering.

Gram Sansad · Rural governance initiative

- Built a multi-tenant web platform that lets each village publish its own website from a single system.

AFM Bigtech — Full Stack Developer **Sep 2022 – Jun 2024**

Fintech product MoneyyApp and client Competishun (JEE/NEET coaching, 500,000+ students) Panchkula, Haryana, India

- Led backend development of Competishun's online learning platform, serving thousands of concurrent students.
- Built secure REST APIs for the web and mobile apps, with real-time live classes and instant test results over WebSockets.
- Designed MongoDB data models for courses, tests and student progress, and sped up video delivery with caching and a CDN.
- Built admin and analytics APIs, payment gateway integration and subscription management.
- Contributed to MoneyyApp, a fintech platform that helps content creators access funding.

EDUCATION

Masai School — Full-Stack Web Development **Sep 2021 – Aug 2022**

Advanced Web Development Certification Bengaluru, India

Pandit Deendayal Upadhyaya Shekhawati University — Bachelor's Degree (Graduation) **2017 – 2020**

Undergraduate degree Sikar, Rajasthan, India

ADDITIONAL INFORMATION

Languages	English (professional), Hindi (native)
Availability	Full-time, remote and contract roles; India and international (IST, overlaps with Europe, Middle East and Asia-Pacific)
