Professional Summary

Results-driven Backend Engineer with 3+ years of experience designing and building scalable microservices architectures for high-traffic applications. Specialized in Node.js/Express ecosystem with expertise in database optimization, distributed systems, and cloud infrastructure. Proven track record of improving API performance by 30% through strategic caching and query optimization. Currently building production-grade systems handling thousands of concurrent users at Shuru Technologies. Passionate about clean code, observability, and delivering reliable backend solutions.

Technical Skills

Backend: Node.js, Express.js, Python, RESTful APIs, Microservices Architecture, Bull Queue (Redis-based)

Databases: PostgreSQL, MySQL, MongoDB, Redis (Caching & Queues), Google BigQuery

Cloud & DevOps: Google Cloud Platform (Cloud SQL, Cloud Functions, BigQuery), AWS (SSM, RDS, EC2), Docker, Kubernetes, Apache Airflow, Git/GitHub

Monitoring & Observability: OpenTelemetry, Distributed Tracing, Jaeger, Cloud Monitoring, Performance Profiling

Authentication & Security: JWT, OAuth 2.0, API Security Best Practices

Frontend: React.js, Redux, JavaScript (ES6+), HTML5, CSS3

Professional Experience

Product Engineer (Backend) | Jun 2024 – Present

Shuru Technologies Private Limited, Gurgaon (Remote)

Building backend systems for a high-traffic coffee pickup application (Pickup Coffee) serving thousands of daily orders across multiple microservices.

- Architected and implemented RESTful microservices using Node.js/Express, achieving 30% reduction in API latency through query optimization and caching strategies
- Designed and deployed distributed tracing infrastructure using OpenTelemetry and Jaeger, enabling end-to-end request monitoring across 5+ microservices (pickup-api, wallet-api, voucher-api, promotions-api, stamps-api)
- Optimized PostgreSQL and Cloud SQL database queries, implemented Redis caching layer reducing database load by 40% and improving response times
- Built secure authentication and authorization systems using JWT and OAuth 2.0 for multi-tenant B2B/B2C applications
- Designed and implemented ETL pipelines using Apache Airflow for automated data workflows with BigQuery integration for analytics
- Developed referral program feature end-to-end: designed RFC documentation, flow diagrams, queue systems for reward distribution, and campaign management APIs
- Implemented Bull Queue (Redis-based) for async job processing including order notifications, reward distribution, and coupon redemption tracking
- Conducted database performance analysis using Cloud Monitoring Query Language, identifying and optimizing slow queries

Full Stack Web Developer | Sept 2022 – Jun 2024

AFM BIGTECH PTE LTD, Singapore (Remote)

Led backend development for a leading JEE/NEET exam preparation platform, building scalable LMS infrastructure.

- Developed scalable backend architecture for Learning Management System serving thousands of concurrent students
- Implemented secure RESTful APIs enabling seamless communication between LMS frontend, mobile apps, and backend services

- Engineered MongoDB database schema with optimized indexing strategies for efficient data storage and retrieval of course content, tests, and user progress
- Built real-time features for live classes and instant test result processing using WebSocket connections
- Developed caching mechanisms and CDN integration to enhance video streaming and content delivery performance
- Created comprehensive admin dashboard APIs for content management, user analytics, and batch processing
- Implemented payment gateway integrations and subscription management system

Key Projects & Achievements

- API Performance Optimization: Reduced API response times by 30% through strategic Redis caching, database query optimization, and connection pooling
- Distributed Tracing Implementation: Set up OpenTelemetry infrastructure from scratch, reducing debugging and issue resolution time by 50%
- Referral Program System: Designed complete referral feature including campaign management, tracking lifecycle, reward distribution queues, and TalonOne integration
- Microservices Architecture: Contributed to system handling 6+ production microservices with high availability on Kubernetes
- Data Pipeline Automation: Built ETL pipelines processing thousands of records daily for analytics and reporting
- Database Optimization: Implemented indexing strategies and query optimization reducing slow queries by 60%

Education

Full-Stack Web Development

Masai School, Bengaluru | Sept 2021 – Aug 2022

Bachelor's Degree

Shekhawati University, Sikar, Rajasthan | 2017 – 2020

Certifications

- Advanced Web Development Certification – Masai School (Aug 2022)

Additional Information

Soft Skills: Strong Problem-solving, Technical Documentation, System Design Thinking, Team Collaboration, Continuous Learning

Interests: System Design, API Architecture, Performance Optimization, Reading Tech Blogs, Listening to Tech Podcasts, Puzzle Challenges

Languages: English (Professional), Hindi (Native)
